Subject:

Discontinuation of Hochiki Conventional SLR-E-IS Intrinsically Safe Photo-Optical Detector

To whom it may concern

We are pleased to announce the release of the SOC-E-IS, our new intrinsically safe conventional smoke detector to replace the SLR-E-IS model. This new replacement model maintains the same functionality and classifications for hazardous environments, and uses the same I.S mounting base YBN-R/4IS.

The SOC-E-IS has been developed with built in technology that ensures its operation at the optimum sensitivity, and reducing the potential for false alarms. By using the same Automatic Sensitivity Window Verification (ASWV) technology, the SOC-E-IS will continue to adjust its sensitivity threshold to compensate contamination inside the optical chamber and provides visual notification when maintenance is required.

The use of this new built-in technology makes the SOC-E-IS more reliable and more superior than its predecessor, the SLR-E-IS.

Should you have any questions or would like to discuss the above further, please don't hesitate to contact the Hochiki Australia office on +61 (0) 2 9738 5566 or sales@hochikiaustralia.com
