

## Product Overview

The institutional sample point consists of a main body, grill & dress fascia ring, all constructed from machined stainless steel. The main body consists of 4 countersunk fixing points & the dress ring secures the grill to the main body using 2 fixing points. The fixing screws used on both the main body & the dress ring are to be of an approved type for the use in institutional facilities.

The sample tube trunk is secured to the rear of the main body using a threaded interface that ensures a secure airtight connection.

The dress ring & grill are easily removable for maintenance purposes.

## ASD-SPI-SS
