

Metalwork Options For Sigma and Syncro Systems

Product Overview

All the metalwork options available are designed to match and complement the complete range of SigmaCP, SigmaXT & SyncroAS control panels.

The 19" rack mount is particularly ideal for use in a combined FIP / QE90 EWIS panel, or when fitted in IP rated enclosure. It houses and supports the entire FIP on a fully hinged swingout frame constructed of welded steel for strength and powder coated to match the fitted panel.

The flush surrounds are available for all cabinet sizes and warning signs. They are designed to complement the look of the entire range of cabinets. All the flush surrounds are easy to install, are constructed of welded steel and powder coated to match the fitted panels.

The ASE brackets are custom made for ROMTEK & CENTAUR alarm signalling equipment. They are finished in light grey satin, to match the entire range Sigma and Syncro panels.

Flush Surround

KM - FS-M2

M2 Flush Surround

- 415W x 340H x 15D (mm)
- Cutout - 385W x 310H (mm)
- Fascia width - 15mm
